Investigator Training Program

The Investigator Training Program is designed to support clinical research investigators. It aims to improve the many skills required for the planning, conducting, and reporting of clinical studies. The ITP provides a forum in which both novice and seasoned investigators/staff involved in clinical studies can share their experiences and receive practical advice on trial organization and execution.

The ITP is divided into a comprehensive series of five modules:

- Module 1: Planning and preparation
- Module 2: Recruitment and enrollment
- Module 3: In-trial procedures
- Module 4: Safety in clinical trials
- Module 5: Monitoring, audits, inspections, and publication

**Target audience** includes principal investigators and their study coordinators, research nurses and administrators, regulatory personnel as well as researchers and lab personnel in drug discovery & preclinical animal studies. In addition, we would like to include 3rd and 4th year residents & post-doctoral trainees, particularly those who are considering faculty positions at MSU.

**Thursday, March 26, 2015** (8:00 a.m. to 5:00 p.m.)

**Friday, March 27, 2015** (8:00 a.m. to 3:30 p.m.)

at the Secchia Center
15 Michigan Street Northeast
Grand Rapids, Michigan
